Something interesting for you

- A (little) problem that could be solved applying NLP
- It could be a pilot/exploratory approach
- As usual, have a look at the lesson website for ideas (from previous projects)

What if I turn my project into a shared task participation?
Not a bad idea

Shared task

- Organised to tackle problems that are challenging to be addressed by a single (group of) researcher(s)
- They are challenging by definition: they propose non-trivial problems, still they are specific and doable
- They provide an evaluation framework: dataset + evaluation metrics (+ submission infrastructure)
- They give a deadline: so one does not end up tweaking the model forever

- Visit the lesson website to see some interesting alternatives
